

Could a simple scan show your risk for heart disease?

Did you know that a simple scan
of the artery in the neck has been
shown to correlate to arteries in
your heart?

Research is underway in your area to determine if a cholesterol medication combined with an investigational medication can reduce plaque build-up in the arteries. If you have high cholesterol, are taking a cholesterol medication, or have a history of heart disease, you may qualify for this study.

All qualified participants will receive a scan of the neck artery, investigational medication and standard cholesterol therapy at no cost as part of this study.

Compensation for travel may be available to those who qualify.
